(1) Undersea Resources and Mining

Undersea Resources and Mining

Land Resources

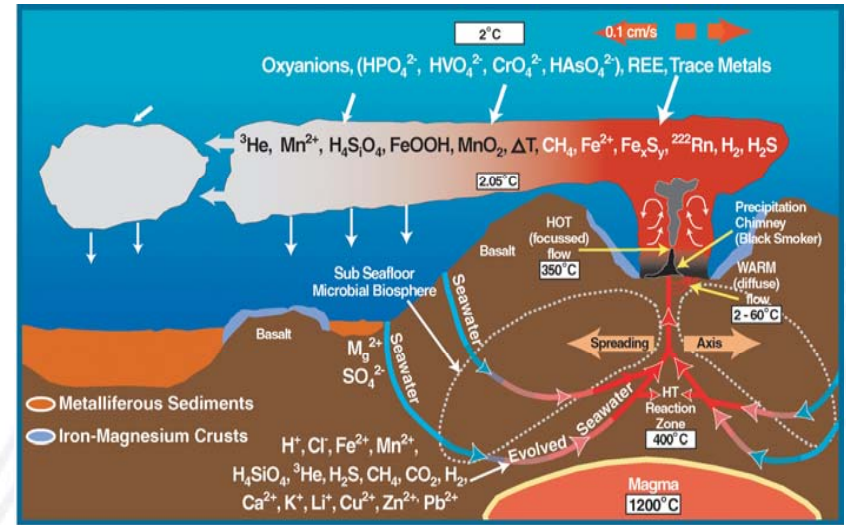

Land resources are depleted and vanished

Marine environment covers more than 70 % of the Earth

Future for the mankind

Minerals and Related Depths

Type of Mineral Deposit	Average Depth	Resources Found
Polymetallic Nodules	4,000 - 6,000 m	Nickel, Copper, Cobalt, and Manganese
Manganese Crusts	800 - 2,400 m	Mainly Cobalt, some Vanadium, Molybdenum and Platinum
Sulfide Deposits	1,400 - 3,700 m	Copper, Lead and Zinc some Gold and Silver

Hydrothermal Vent Formation & the Formation of Seafloor Massive Sulfides (Birney et al., 2007)

No Human Allowed Environments
Mining Method/ What Kind of Tools to Use..
Etc.....

Current Undersea Mining Technology

Undersea Drilling

Human Operated Submersible

Remotely Operated Underwater Vehicle

Mixed with Man-Machine Operations

Very Few options for Disaster (Oil Spill in 2011)

Future Directions

SMART Underwater Robot

Safe Underwater Oil Drilling

Accidents/ Disaster Prevention Measures

Sustainability and Effectiveness of Operation

SCHOOL

(2) Smart Underwater Robot (SUR) Technology

Why ?

- Entering a hostile or deep area (man cannot go) and gathering much information
- Quickly identifying possible mining areas and safe paths gathering, transmitting
- Continuous operations at the ocean floor
- Avoid any human related accidents
- High efficiency in operations

From Dictionary

- * Intelligent, Clever/Expert
- * **Machines uses computer technology to make them effective.**
- * Wisdom, 智慧/知慧
- * 지혜는 이치를 깨우치고 사물을 정확하게 처리하는 정신적 능력

- Agile Body/Vehicle Structure
- Mission Management System (Vehicle Management)
- Intelligent Navigation System (Obstacle Avoidance)
- Simultaneous Location and Mapping (SLAM) →
Perception of Environment
- Target/ Object Recognitions
- Effective Mission Accomplishment
- Effective Networked/ Communication
- Swarm/Cooperative Operation? Maneuvering
- Cost Effectiveness

Undersea Mining Characteristics

- **Effective Search/ Confirming the Site**
- **Excavation and Development Stability**
- **Delivery of Ore and Resource**
- **Mining System/Complex Operation**
- **Sensitivity in Environmental Issues**
- **Disaster Prevention and Recovery**
- **Networked Communications**
- **System of Systems Management**

SMART Underwater Robot

Center for Autonomous Vehicle Research
CAVR

- **Intelligent/Effective Performances**
- **Overall Mission Management System**
- **Smart Vehicle Operations**
- **Obstacle Avoidance/Management**
- **Intelligent Perception of Environment**
- **High Probability in Recognition of Target/Object**
- **Sustainability/Interoperability**

System Autonomy

Rule #1 → Gain information about the environment

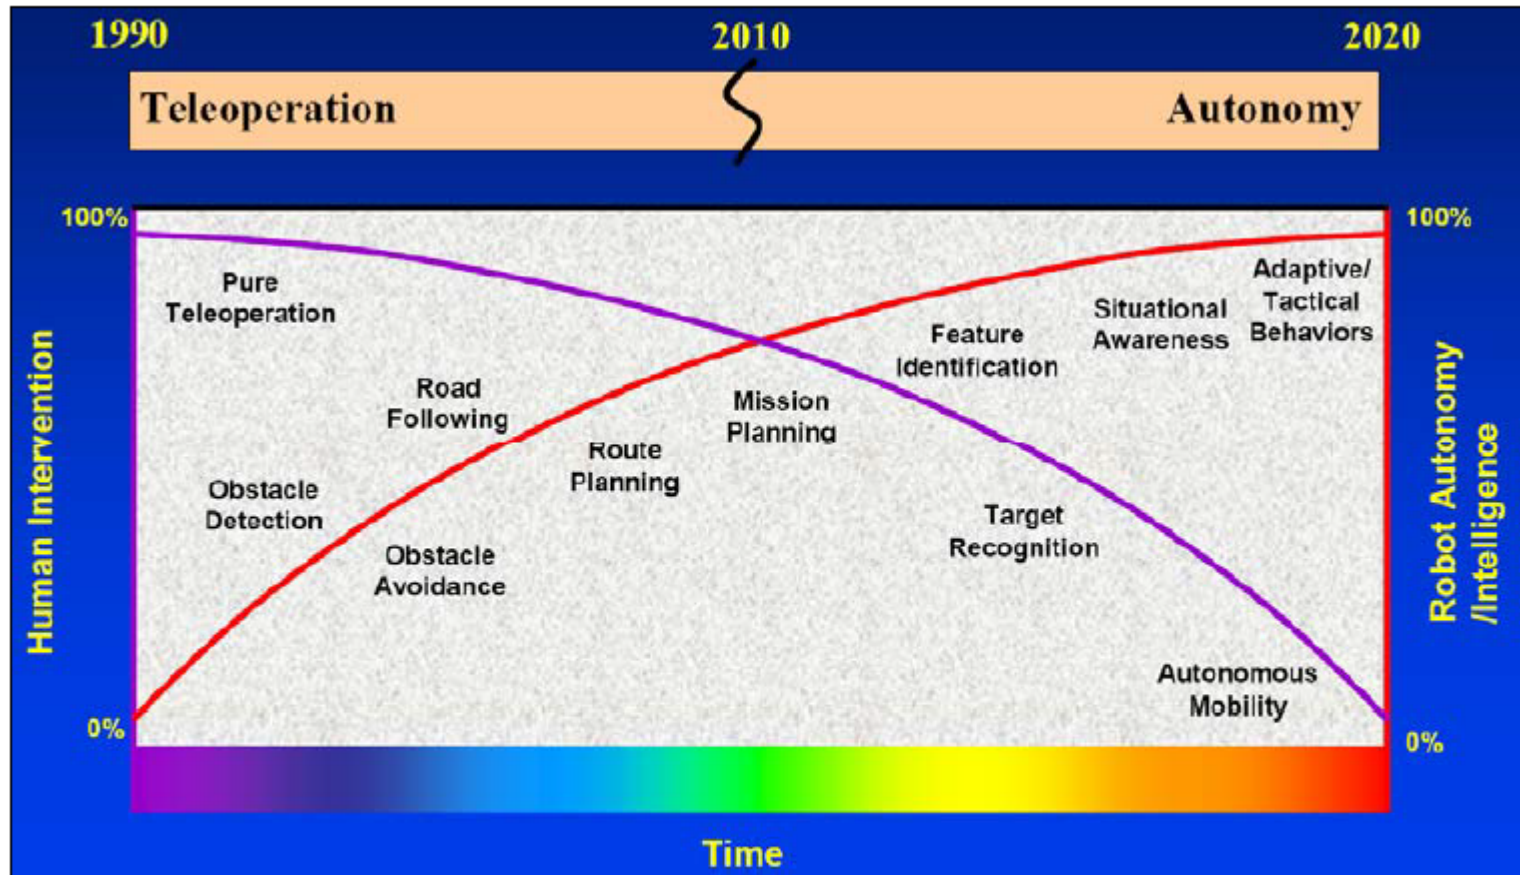

Rule #2 → Work for an extended period without human intervention

Rule #3 → Move either all or part of itself throughout its operating environment without human assistance

Rule #4 → Avoid situations that are harmful to people, property, or itself

**Rule #5 → Maintain its own survival at the expense of the previous rules
(Sentient Robot Mandate)**

Rule #6 → Learn or gain new capabilities like adjusting strategies for accomplishing its task(s) or adapting to changing surroundings.

Projected Evolution of the Level of Autonomy in Unmanned Vehicles from 1990 to 2020 (From: JRP, 04)

Endurance and Sustainability

Unmanned Systems

Unmanned Air Vehicle Power

- Long endurance fuel cell power (26 hr flight Nov 2009)
- Low noise & heat signature
- Affordable (\$80K/vehicle)

550 W fuel cell

Unmanned Undersea Vehicle Power

- Lithium-ion battery safety
- Air independent power systems: fuel cell, hybrid electric, AI-water

ONR Swampworks

Placement of Stirling Engines in Sea Lion Section

3 kW per Stirling Engine
48 Inch Hull Dia.

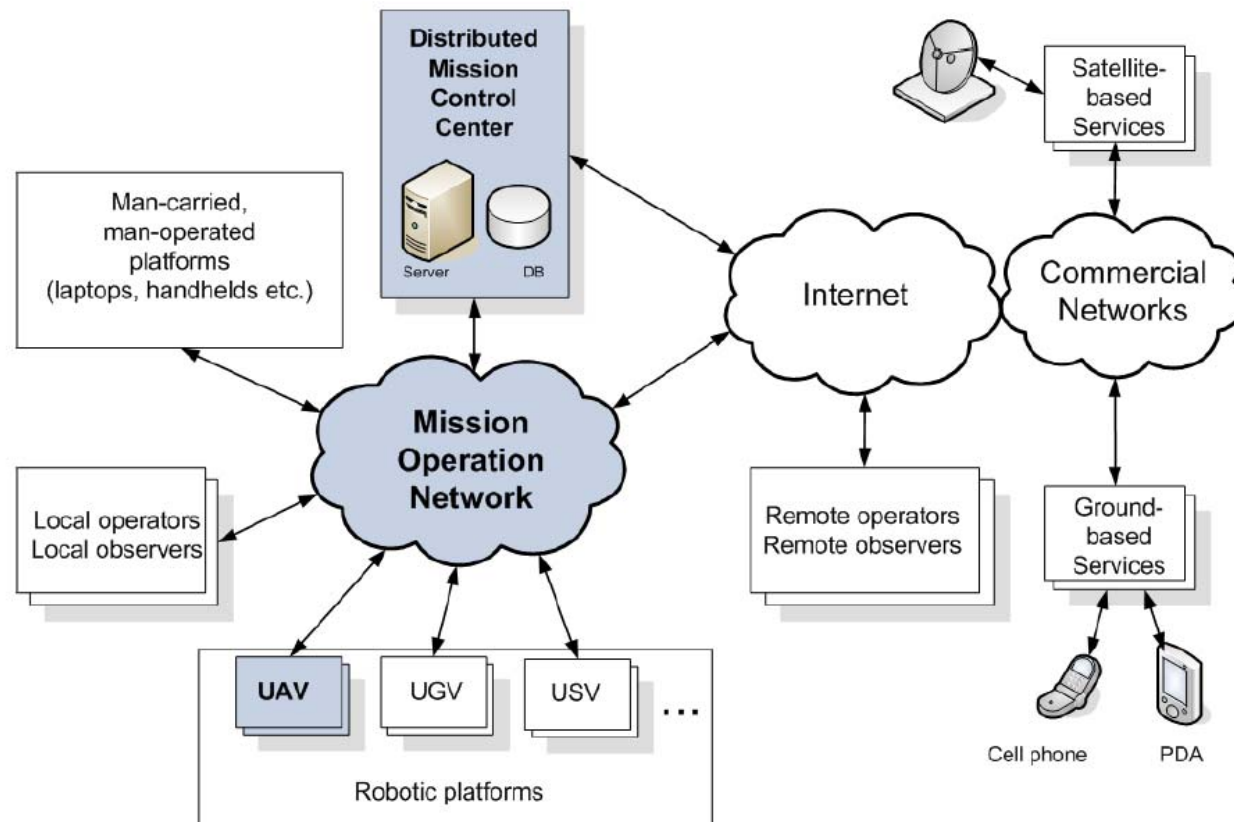

Unmanned Surface Vehicles

- Advanced platform designs
- Launch & recovery
- Autonomous operation

OFFICE OF NAVAL RESEARCH

Networked Communication Systems

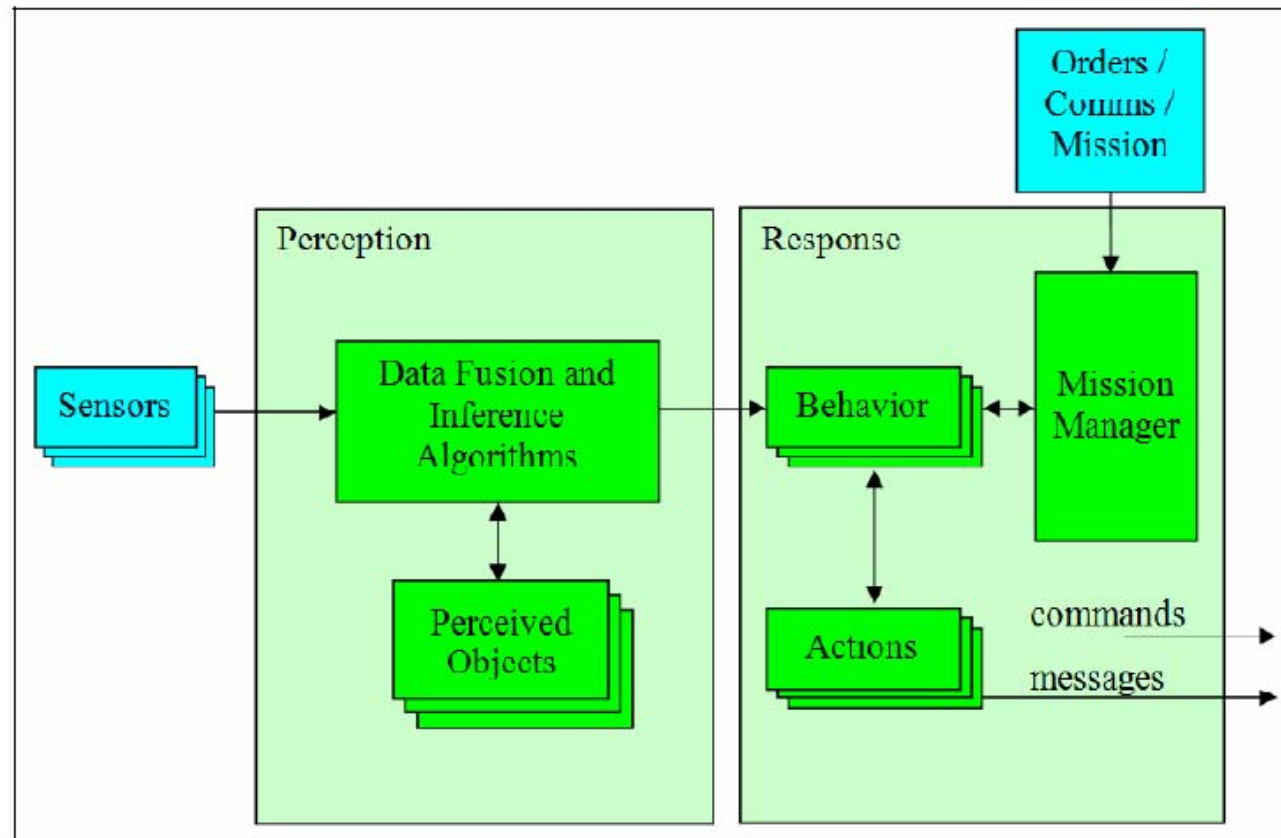

Network-Centric architecture overview.

System Mission Management Systems

- **Improved Performance**
- **Informed Decisions**
- **Smarter Control**
- **Better Resource Efficiencies**
- **Superior Responsiveness**
- **Reduced communication Requirements**

Behavioral Autonomous Vehicle Control as Implemented in the Pennsylvania State University Applied Research Laboratory Intelligent Control Architecture (After: Lewis and Weiss, 04)

Sea Floor Unmanned Excavation Vehicle

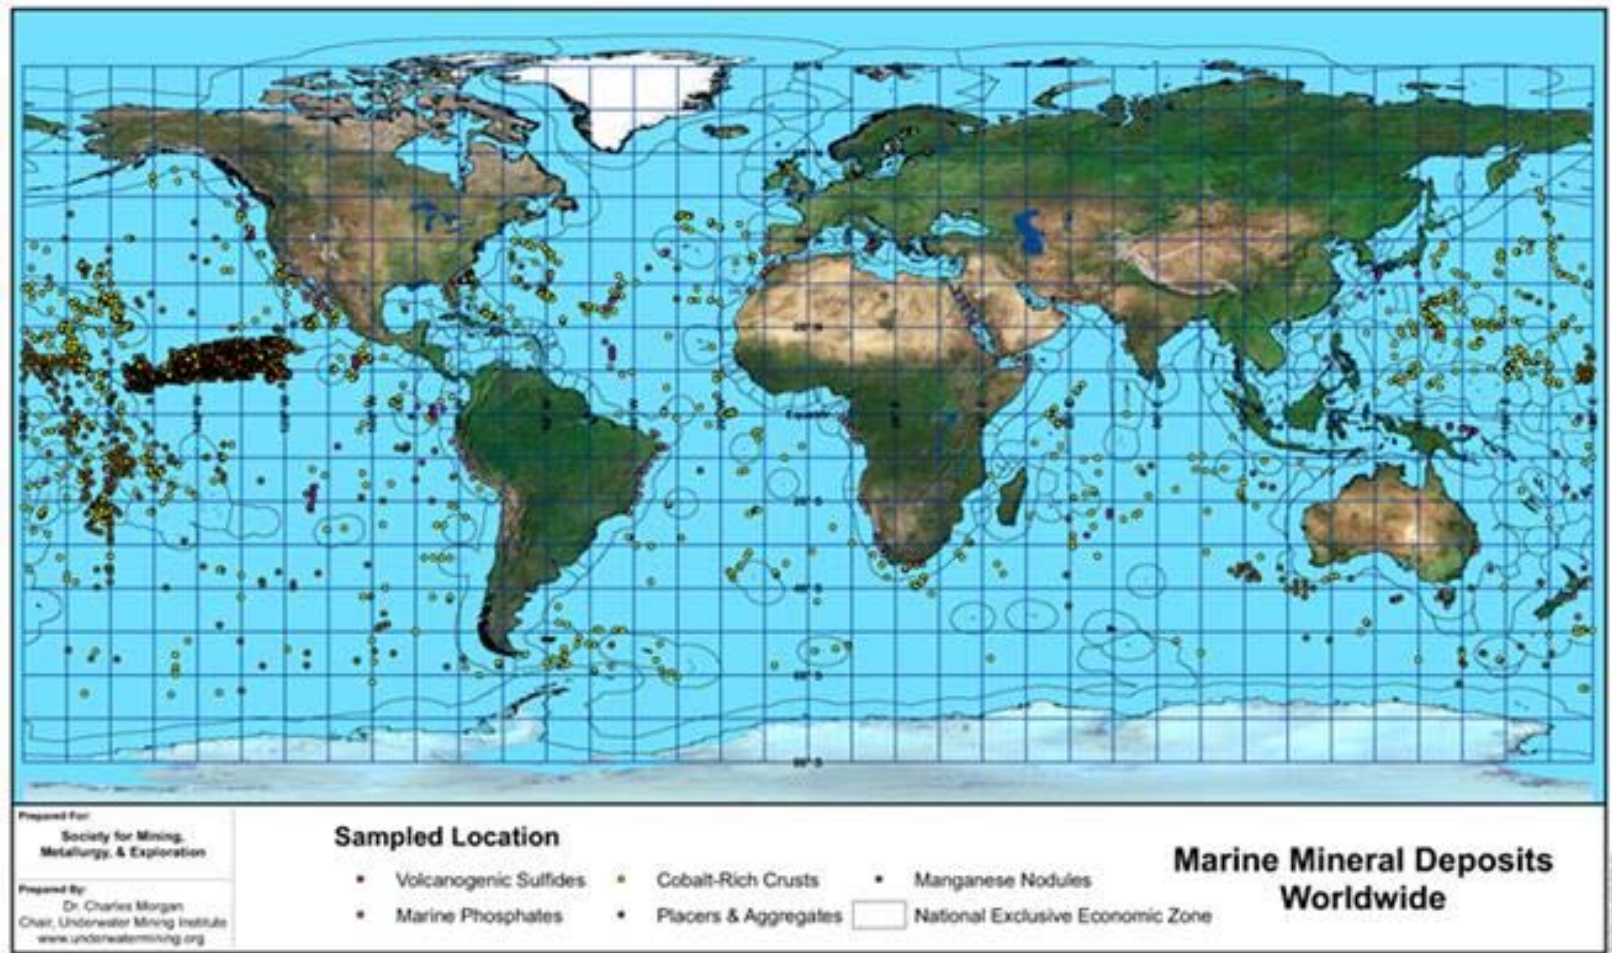

Nautilus has investigated the use of proven subsea technology for mining the SMS deposits. This 900HP ROV oil/gas pipeline trenching machine is as powerful as a D11 bulldozer.
