

Operations Research Seminar

Cooperative Operations and Applied Science & Technology Studies (COASTS) Research Program Thesis Opportunities

James Ehlert

Director, COASTS International Field Experimentation

Thomas Anderson

USACE ERDC Liaison to TRAC-Monterey Research

Operational research opportunities exist for both field and M&S associated with the Cooperative Operations and Applied Science & Technology Studies (COASTS) program. COASTS is a large-scale international field experimentation program to develop and assess leading edge technologies for specific highly relevant military, peacekeeping and stability operations, law enforcement, and first responder missions. COASTS engages international and domestic partners at the R&D level through cooperative science & technology field experimentation to investigate and match participant mission needs with integrated command and control, computers, communications, intelligence, surveillance and reconnaissance (C4ISR) solutions in domestic, bi-lateral and multi-national environments. COASTS is close partners with TRAC and USACE ERDC, thus providing a complete spectrum of research at all TRL levels and can match many thesis interests with highly visible and important projects.

Date: Thursday, February 26, 2009

Time: 15:00-16:00

Location: GL-115
